MANAGEMENT'S DISCUSSION AND ANALYSIS

The following Management's Discussion and Analysis ("MD&A") of Spartan Energy Corp. ("Spartan" or the "Company") was prepared on, and is dated as at, November 8, 2017 and is management's assessment of the Company's financial and operating results for the quarter ended September 30, 2017. This MD&A should be read in conjunction with the interim consolidated financial statements and related notes thereto of the Company for the quarter ended September 30, 2017 and the audited consolidated financial statements and related notes thereto of the Company for the year ended December 31, 2016. All financial measures are expressed in Canadian dollars unless otherwise indicated. The interim consolidated financial statements were prepared under International Accounting Standard (IAS) 34 Interim Financial Reporting as issued by the International Accounting Standards Board (IASB), which is within Part 1 of the Canadian Institute of Chartered Accountants handbook, which itself is within the framework of International Financial Reporting Standards (IFRS). The results for the three and nine months ended September 30, 2017 are not necessarily indicative of the results to be expected for any future period, or for the fiscal year ended December 31, 2017. Additional information on the financial statements, this MD&A and other factors that could affect the Company's operations and financial results are included in reports, including the Company's Annual Information Form, on file with Canadian securities regulatory authorities and may be accessed through the SEDAR website (www.sedar.com).

REPORTING ENTITY

Spartan Energy Corp. ("Spartan" or the "Company") is an Alberta incorporated oil and natural gas exploration and production company whose business activities are focused in Western Canada. The interim consolidated financial statements of the Company as at and for the three and nine months ended September 30, 2017 are comprised of the Company and its wholly-owned subsidiaries Renegade Petroleum (North Dakota) Ltd. and Petro Uno Resources Ltd. – North Dakota, which were incorporated under the laws of the State of North Dakota. The Company's head office address is Suite 500, 850 – 2nd Street SW, Calgary, Alberta T2P 0R8. The common shares of the Corporation are listed on the Toronto Stock Exchange under the symbol "SPE".

BASIS OF PRESENTATION

The interim consolidated financial statements and comparative information have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") applicable to the preparation of interim financial statements, including IAS 34 "Interim Financial Reporting". For a summary of the Company's detailed accounting policies, refer to note 2 of the Company's December 31, 2016 consolidated financial statements. This MD&A compares the results of the three months ended September 30, 2017 ("Q3 2017") to the three months ended September 30, 2016 ("Q3 2016") as well as the nine months ended September 30, 2017 to the nine months ended September 30, 2016. The terms "third quarter of 2017" and "same period of 2016" or similar terms are used throughout this document and refer to the three month periods ended September 30, 2017 and 2016, respectively.

READER ADVISORIES

BOE Disclosure

The term barrels of oil equivalent ("BOE") may be misleading, particularly if used in isolation. A BOE conversion ratio of six thousand cubic feet per barrel (6mcf/bbl) of natural gas to barrels of oil equivalence is based on an energy equivalency

conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. All BOE conversions in the report are derived from converting gas to oil in the ratio mix of six thousand cubic feet of gas to one barrel of oil.

Forward Looking Statements

Certain information included in this MD&A constitutes forward-looking information under applicable securities legislation. Forward-looking information typically contains statements with words such as "anticipate", "believe", "expect", "plan", "intend", "estimate", "propose", "project" or similar words suggesting future outcomes or statements regarding an outlook. Forward-looking information in this MD&A may include, but is not limited to, planned drilling and completion activities, future production levels and the completion of asset acquisitions.

The forward-looking statements contained in this MD&A are based on certain key expectations and assumptions made by Spartan, including expectations and assumptions concerning the success of future drilling, development and completion activities, the performance of existing wells, the performance of new wells, the availability and performance of facilities and pipelines, the geological characteristics of Spartan's properties, the successful application of drilling, completion and seismic technology, prevailing weather and break-up conditions, commodity prices, royalty regimes and exchange rates, the application of regulatory and licensing requirements, the availability of capital, labour and services, the creditworthiness of industry partners and the satisfaction of all conditions to the closing of the asset acquisitions.

Although Spartan believes that the expectations and assumptions on which the forward-looking statements are based are reasonable, undue reliance should not be placed on the forward-looking statements because Spartan can give no assurance that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks. These include, but are not limited to, risks associated with the oil and gas industry in general (e.g., operational risks in development, exploration and production; the uncertainty of reserve estimates; the uncertainty of estimates and projections relating to production, costs and expenses, and health, safety and environmental risks), constraint in the availability of services, commodity price and exchange rate fluctuations, adverse weather or break-up conditions and uncertainties resulting from potential delays or changes in plans with respect to exploration or development projects or capital expenditures. These and other risks are set out in more detail in Spartan's Annual Information Form for the year ended December 31, 2016.

Forward-looking information is based on a number of factors and assumptions which have been used to develop such information but which may prove to be incorrect. Although Spartan believes that the expectations reflected in its forward looking information are reasonable, undue reliance should not be placed on forward-looking information because Spartan can give no assurance that such expectations will prove to be correct. In addition to other factors and assumptions which may be identified in this MD&A, assumptions have been made regarding and are implicit in, among other things, the timely receipt of any required regulatory approvals (including Court and shareholder approvals) and the satisfaction of all conditions to the completion of the transaction. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which have been used.

The forward-looking information contained in this MD&A is made as of the date hereof and Spartan undertakes no obligation to update publicly or revise any forward-looking information, whether as a result of new information, future events or otherwise, unless required by applicable securities laws. The forward looking information contained in this MD&A is expressly qualified by this cautionary statement.

NON-IFRS MEASURES

Certain financial measures referred to in this MD&A, such as adjusted funds flow from operations, adjusted funds flow from operations per share, excess adjusted funds flow from operations, total development capital expenditures, net debt and net debt excluding finance lease obligations are not prescribed by IFRS. Adjusted funds flow from operations is calculated based on cash flows from operating activities before changes in non-cash working capital, transaction costs and decommissioning obligation expenditures incurred. Adjusted funds flow from operations per share is calculated using weighted average shares outstanding consistent with the calculation of net income (loss) per share. Excess adjusted funds flow from operations is calculated based on adjusted funds flow operations less total development capital expenditures. Spartan uses adjusted funds

flow from operations to analyze operating performance and leverage, and considers adjusted funds flow from operations to be a key measure as it demonstrates the Company's ability to generate cash necessary to fund future capital investments and repay debt. Spartan's determination of adjusted funds flow from operations, on an absolute and per share basis, and excess adjusted funds flow from operations may not be comparable to that reported by other companies.

The following table reconciles adjusted funds flow from operations (a non-IFRS measure) to cash flow from operating activities, which is the most directly comparable measure calculated in accordance with IFRS:

(\$ thousands)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Adjusted funds flow from operations	41,066	18,922	117	136,231	43,791	211
Transaction costs	(5)	(166)	(97)	(373)	(731)	(49)
Settlement of decommissioning liabilities	(128)	-	n/a	(128)	-	n/a
Changes in non-cash working capital	(6,740)	(5,162)	31	5,637	(23,628)	(124)
Cash flow from operating activities	34,193	13,594	152	141,367	19,432	627

The following table reconciles adjusted funds flow from operations (a non-IFRS measure) to excess adjusted funds flow from operations (a non-IFRS measure):

(\$ thousands)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Adjusted funds flow from operations	41,066	18,922	117	136,231	43,791	211
Total development capital expenditures	(35,111)	(19,867)	77	(104,709)	(42,640)	146
Excess adjusted funds flow from operations	5,955	(945)	(730)	31,522	1,151	2639

Total development capital expenditures is calculated as total capital expenditures less land and seismic, waterflood capital and acquisitions.

The following table reconciles total development capital expenditures (a non-IFRS measure) to total capital expenditures, which is the most directly comparable measure calculated in accordance with IFRS:

(\$ thousands)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Total development capital expenditures	35,111	19,867	77	104,709	42,640	146
Land and seismic	913	913	-	5,781	2,126	172
Waterflood capital	515	-	n/a	2,074	-	n/a
Acquisitions	4,365	23,470	(81)	11,966	87,923	(86)
Total capital expenditures	40,904	44,250	(8)	124,530	132,689	(6)

Net debt is calculated as bank debt plus trade and other liabilities plus finance lease obligations less current assets. The following table reconciles net debt (a non-IFRS measure) to bank debt (an IFRS measure):

(\$ thousands)	September 30, 2017	December 31, 2016
Net debt	233,076	245,685
Trade and other liabilities	(56,676)	(38,546)
Finance lease obligations	(27,941)	(31,124)
Current assets	44,808	41,906
Bank debt	193,267	217,921

Spartan management considers net debt excluding finance lease obligations to be a meaningful measure of the Company's leverage and liquidity. The following table reconciles net debt (a non-IFRS measure) to net debt excluding finance lease obligations (a non-IFRS measure):

(\$ thousands)	September 30, 2017	December 31, 2016
Net debt	233,076	245,685
Finance lease obligations	(27,941)	(31,124)
Net debt excluding finance lease obligations	205,135	214,561

This MD&A also contains other industry benchmarks and terms, including total market capitalization (defined as net debt plus total outstanding common shares multiplied by the period end market price per share), operating netbacks (calculated on a per unit basis as oil, gas and natural gas liquids revenues, plus/minus realized derivative contracts, less royalties and less operating and transportation costs), and corporate netbacks (calculated on a per unit basis as oil, gas and natural gas liquids revenues, plus/minus realized derivative contracts, less royalties, less operating and transportation costs, less general and administrative expenses and less interest expense), which are not recognized measures under IFRS. Management believes that in addition to net income (loss) and cash flow from (used in) operating activities, adjusted funds flow from operations, excess adjusted funds flow from operations, net debt, net debt excluding finance lease obligations, total market capitalization and operating and corporate netbacks are useful supplemental measures as they provide an indication of Spartan's operating performance, leverage and liquidity. Investors should be cautioned, however, that these measures should not be construed as an alternative to both net income (loss) and cash flow from (used in) operating activities, which are determined in accordance with IFRS, as indicators of Spartan's performance.

DISCLOSURE CONTROLS AND PROCEDURES

The Chief Executive Officer ("CEO") and the Chief Financial Officer ("CFO") have designed, or caused to be designed under their supervision, disclosure controls and procedures as defined in National Instrument 52-109 of the Canadian Securities Administrators, to provide reasonable assurance that: (i) material information relating to the Company is made known to the CEO and the CFO by others, particularly during the period in which the annual and interim filings are being prepared; and (ii) information required to be disclosed by the Company in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation. The CEO and the CFO have evaluated the effectiveness of Spartan's disclosure controls and procedures as at September 30, 2017 and have concluded that such disclosure controls and procedures are effective.

INTERNAL CONTROLS OVER FINANCIAL REPORTING

The CEO and the CFO have designed, or caused to be designed under their supervision, internal controls over financial reporting as defined in National Instrument 52-109 of the Canadian Securities Administrators, in order to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. The CEO and the CFO have evaluated the effectiveness of Spartan's internal controls over financial reporting as at December 31, 2016 and have concluded that such internal controls over financial reporting are effective. There were no material changes to the Company's internal controls over financial reporting during the interim period from January 1, 2017 to September 30, 2017.

It should be noted that while Spartan's CEO and CFO believe that the Company's internal controls and procedures provide a reasonable level of assurance and are effective, they do not expect that these controls will prevent all errors or fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that its objectives are met. In addition, projections of any evaluation relating to the effectiveness in future periods are subject to the risk that controls may become inadequate as a result of changes in conditions, or that the degree of compliance with policies and procedures may deteriorate.

THIRD QUARTER 2017 HIGHLIGHTS

- Achieved record average production of 22,630 boe/d (91% oil and liquids), representing an 82% increase (14% per share) over the third quarter of 2016.
- Generated adjusted funds flow from operations of \$41.1 million (\$0.23 per basic share and \$0.22 per diluted share), representing an increase of 117% (35% per basic share) over the third quarter of 2016.
- Delivered excess adjusted funds flow from operations in the quarter of approximately \$6.0 million, increasing 2017 year to date excess adjusted funds flow from operations to \$31.5 million.
- Drilled 39 (28.0 net) development wells in the third quarter and brought 37 (27.2 net) wells on production.
- Reduced operating and transportation expenses to \$17.28 per boe, a decrease of 5% from the third quarter of 2016 and a decrease of 6% from the second quarter of 2017.
- Reduced net general and administrative (“G&A”) expenses to \$1.05 per boe, a 36% decrease from the third quarter of 2016.
- Maintained our balance sheet strength, with net debt (exclusive of finance lease obligations) at the end of the quarter of \$205.1 million, representing 1.3x annualized third quarter adjusted funds flow from operations, and available liquidity of \$144.9 million.

RESULTS OF OPERATIONS

Production

For the three month period ended September 30, 2017, Spartan achieved average total production of 22,630 boe/d compared to 12,429 boe/d for the same period in 2016, a 82 percent increase. Average production for the nine months ended September 30, 2017 of 22,054 boe/d was 112 percent higher than production for the nine months ended September 30, 2016 of 10,403 boe/d. In the nine months ended September 30, 2017, the Company brought 93 (76.5 net) wells on production. Spartan successfully completed five acquisitions throughout 2016 adding approximately 10,930 boe/d of production as at the closing dates of each acquisition. These five acquisitions, combined with the Company’s successful 2016 and 2017 drilling programs, resulted in an increase in production for the three and nine months ended September 30, 2017 compared to the same periods in the prior year. Average production for the three months ended September 30, 2017 of 22,630 boe/d was 3 percent higher than production for the three months ended June 30, 2017 of 22,061 boe/d.

	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Crude Oil (bbls/d)	19,742	10,733	84	19,497	9,161	113
Natural Gas (mcf/d)	12,377	6,453	92	10,787	4,669	131
Liquids (bbls/d)	825	620	33	759	464	64
Total (boe/d)	22,630	12,429	82	22,054	10,403	112

Oil and Gas Sales

Oil and gas sales for the three month period ended September 30, 2017 increased 94 percent to \$97.8 million from \$50.5 million for the three month period ended September 30, 2016. For the nine months ended September 30, 2017, oil and gas sales increased by 168 percent to \$307.4 million from \$114.7 million for the same period in the prior year.

The increase in oil and gas sales for the three and nine months ended September 30, 2017 was a result of an increase in production volumes as well as an increase in the Company’s realized oil and gas sales price. The Company’s realized oil and gas sales price increased by 6 percent to \$46.98/boe in the third quarter of 2017 compared to \$44.20/boe in the third quarter of 2016. The Company’s realized oil and gas sales price increased by 27% to \$51.06/boe for the nine month period ended September 30, 2017 compared to \$40.25/boe for the same period in the prior year.

Sales are impacted by production levels and volatility in commodity pricing. Production levels are impacted by decline rates and the Company’s capital program and acquisitions. Commodity prices are affected by both domestic and international factors that are beyond the control of the Company.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Oil and gas sales by product:						
Light crude oil	93,222	48,591	92	293,686	110,997	165
Natural gas	2,483	1,208	106	8,017	2,219	261
Natural gas liquids	2,102	735	186	5,719	1,529	274
Total oil and gas sales	97,807	50,534	94	307,422	114,745	168

Benchmark and Realized Pricing

All of Spartan's crude oil was sold into the spot market during the three and nine months ended September 30, 2017. Spartan's realized price for its light crude oil sales in the third quarter of 2017 was \$51.33/bbl compared to a realized sales price of \$49.21/bbl for the same period in 2016. For the nine months ended September 30, 2017, the Company's realized light crude oil sales price was \$55.18/bbl compared to \$44.22/bbl for the same period in 2016.

Spartan realized a sales price of \$27.69/bbl on its natural gas liquid ("NGL") sales in the third quarter of 2017 compared to \$12.90/bbl in the third quarter of 2016. For the nine months ended September 30, 2017, the Company realized a NGL sales price of \$27.61/bbl compared to \$12.01/bbl for the same period in the prior year.

The Company realized a natural gas sales price of \$2.18/mcf for the three months ended September 30, 2017 compared to \$2.03/mcf in the same period of 2016 and realized a natural gas sales price of \$2.72/mcf for the nine months ended September 30, 2017 compared to \$1.73/mcf for the same period of 2016.

Spartan's production is sold in Canada and is sensitive to commodity price variation and changes in the Canada/U.S. currency exchange rate as well as quality price differentials. Spartan's crude oil price realizations are influenced by changes to various crude benchmarks, including, but not limited to, Canadian LSB at Cromer, Manitoba. Commodity prices are affected by both domestic and international factors that are beyond the control of the Company. In addition, prices received for crude oil are determined by the quality of the crude compared to a benchmark price for light oils. The increase in Spartan's realized price for light crude oil in Q3 2017 compared to Q3 2016 is consistent with the increase in the Canadian LSB benchmark at Cromer, Manitoba.

	For the three months ended September 30,			For the nine months ended September 30,

(1) Prior to realized derivative contracts

Royalties

Royalty payments are made to the owners of the mineral rights on leases, which include provincial governments and freehold landowners, as well as to other third parties by way of contractual overriding royalties. Overriding royalties are generally paid to third parties where Spartan has entered into agreements to earn an interest in their mineral rights by investing capital in their property. Oil and gas sales generated in Saskatchewan are also subject to the Saskatchewan resource surcharge royalty. Wells drilled prior to October 1, 2002 are subject to a 3.0% surcharge on all oil and gas sales while wells drilled after September

30, 2002 are charged at a rate of 1.7% on all oil and gas sales. As Saskatchewan revenues vary, this cost is expected to fluctuate in direct correlation.

For the three months ended September 30, 2017, total royalties were \$16.2 million compared to \$7.8 million for the same period of 2016. The Company's average royalty rate for the three months ended September 30, 2017 was 17 percent of sales compared to 15 percent of sales for the same period of 2016. For the nine months ended September 30, 2017, royalties were \$50.1 million, or 16 percent of sales, as compared to \$17.2 million, or 15% of sales, for the same period in 2016. The increase in royalties for the three and nine months ended September 30, 2017 compared to the three and nine months ended September 30, 2016 is consistent with the increase in oil and gas sales over the same periods. The increase in royalties as a percentage of oil and gas sales is a result of acquiring higher royalty rate assets in 2016 and an increase in the percentage of wells drilled on lands with freehold mineral ownership. A higher proportion of the wells drilled by Spartan in the second and third quarters of 2017 were on lands with freehold royalty ownership compared to recent periods where the capital program has trended to drilling wells on Crown lands. Wells drilled on lands where freehold mineral ownership exists do not qualify for similar royalty incentives that are available to producers for wells drilled on Crown lands in Saskatchewan.

In addition, the Saskatchewan government levies an additional freehold production tax on all oil and gas sales from wells drilled on freehold royalty owner lands. Similar to the Crown royalty incentives available in Saskatchewan, freehold production tax incentives are available on the first 6,000 m3 of oil and gas sales for wells drilled after September 30, 2002. The Company incurred higher freehold production taxes in the third quarter of 2017, which contributed to the Company's higher average royalty rate, as a number of wells drilled in prior periods surpassed the sales volume threshold in the second and third quarters of 2017 and no longer qualified for the freehold production tax incentives they had benefited from in prior quarters.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Royalties	16,243	7,805	108	50,134	17,205	191
\$ per boe	7.80	6.83	14	8.33	6.04	38
% of oil and gas sales	17	15	13	16	15	7

Operating & Transportation

Operating and transportation costs totaled \$36.0 million, or \$17.28/boe, for the three months ended September 30, 2017 as compared to \$20.9 million, or \$18.28/boe, in the third quarter of 2016. For the nine months ended September 30, 2017, operating and transportation costs totaled \$107.0 million, or \$17.77/boe, compared to \$46.3 million, or \$16.23/boe, for the same period in the prior year.

Operating and transportation costs increased for the three and nine months ended September 30, 2017, compared to the same periods in the prior year, primarily as a result of the Company's five acquisitions in 2016. Spartan added approximately 10,930 boe/d of production from the acquisitions, on their respective closing dates, which resulted in increased lifting costs associated with the increased volumes.

Operating and transportation costs decreased on a per boe basis to \$17.28/boe in the third quarter of 2017 compared to \$18.28/boe in the third quarter of 2016 and \$18.47/boe in the second quarter of 2017 primarily due to the increase in production volumes. Operating and transportation costs increased on a per boe basis for the nine months ended September 30, 2017, compared to the same period in the prior year, due to the acquisition of higher operating cost properties in 2016 and due to ongoing maintenance and well servicing that, once completed, resulted in increased production levels. Certain wells acquired by Spartan in the summer of 2016 produce at higher total fluid levels resulting in increased water handling charges and increased power costs. The Company also incurred additional facility turnaround costs on the acquired assets in the first nine months of 2017 which contributed to the increased operating and transportation costs in 2017.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Operating and transportation costs	35,972	20,905	72	106,964	46,274	131
Operating and transportation costs per boe (\$)	17.28	18.28	(5)	17.77	16.23	9

General and Administrative Expenses

During the third quarter of 2017, general and administrative expenses (G&A), net of capitalized and overhead recovery amounts, were \$2.2 million, or \$1.05/boe, as compared to the quarter ended September 30, 2016 where net G&A expenses were \$1.9 million, or \$1.63/boe. Gross G&A expenses, prior to the effects of capitalized and overhead recoveries amounts, were \$5.1 million, or \$2.45/boe, as compared to the quarter ended September 30, 2016 where gross G&A expenses were \$3.9 million, or \$3.44/boe. For the nine months ended September 30, 2017, G&A, net of capitalized and overhead recovery amounts was \$6.5 million, or \$1.08/boe, as compared to the September 30, 2016 amounts of \$5.5 million, or \$1.92/boe. Gross G&A expenses prior to the effects of capitalized and overhead recovery amounts were \$15.3 million, or \$2.54/boe, for the nine months ended September 30, 2017 as compared to the same period of 2016 where gross G&A expenses were \$10.6 million, or \$3.72/boe.

G&A expenses increased for the three and nine month periods ended September 30, 2017, compared to the same periods in the prior year, due to an increase in corporate overhead cost requirements necessary to support the Company's growth. Spartan completed five acquisitions in 2016 growing production by 82 percent from Q3 2016 to Q3 2017.

Gross and net G&A expenses decreased on a per boe basis for both the three and nine months ended September 30, 2017, compared to the same periods in the prior year, due to an increase in production volumes as well as the Company's commitment to reducing corporate overhead costs and increasing operational efficiencies.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Gross general and administrative expenses	5,099	3,937	30	15,294	10,593	44
Less - recoveries	(1,985)	(1,389)	43	(6,139)	(3,213)	91
Less - capitalized	(930)	(680)	37	(2,637)	(1,915)	38
General and administrative expenses	2,184	1,868	17	6,518	5,465	19
Net general and administrative expenses (\$/boe)	1.05	1.63	(36)	1.08	1.92	(44)
Gross general and administrative expenses (\$/boe)	2.45	3.44	(29)	2.54	3.72	(32)

Interest Expense

Interest expense, net of interest income, for the three month period ended September 30, 2017 was \$2.3 million compared to \$1.0 million for the same period of 2016. Interest expense, net of interest income, for the nine months ended September 30, 2017 was \$7.6 million compared to \$1.9 million for the same period of 2016.

As at September 30, 2017, the Company had \$193.3 million drawn on its credit facility compared to \$48.3 million drawn on its credit facility at September 30, 2016. The larger average bank debt balance outstanding, primarily a result of financing a portion of the ARC Acquisition in December 2016, contributed to an increase in the Company's interest expense for the three and nine months ended September 30, 2017 compared to the same periods in the prior year.

In addition, as part of the acquisition of Wyatt Oil and Gas Inc. on June 23, 2016, Spartan inherited a contract whereby the Company is committed to deliver minimum gas volumes to a third party gas processing facility constructed at the Alameda oil battery for a period of eight years. The eight year financial commitment was identified as a finance lease under IAS 17 - Leases. The finance lease obligation is presented as a current and non-current liability on the Statement of Financial Position (see note 7 of the interim consolidated financial statements). Monthly payments are made to the third party plant operator and are accounted for as payments of principal outstanding on the finance lease obligation as well as interest expense accrued on the outstanding obligation. In the third quarter of 2017, \$0.4 million was recognized as interest expense accrued on the outstanding principal.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Interest expense	2,342	983	138	7,575	1,948	289
Interest expense (\$ per boe)	1.12	0.86	30	1.26	0.68	85

Depletion and Depreciation

For the third quarter of 2017, depletion and depreciation expense was \$47.5 million, or \$22.79/boe, as compared to the quarter ended September 30, 2016 where the expense was \$25.2 million, or \$22.06/boe. For the nine months ended September 30, 2017, depletion and depreciation expense was \$137.3 million, or \$22.80/boe, as compared to the 2016 expense of \$70.3 million, or \$24.67/boe.

The increase in depletion and depreciation expense for the three and nine months ended September 30, 2017, compared to the same periods in the prior year, is due to an increase in costs subject to depletion as a result of the five acquisitions completed by the Company in 2016. The decrease in depletion and depreciation expense per boe for the nine months ended September 30, 2017 is a result of the Company increasing proved plus probable reserves volumes at a higher rate than the associated increase in current and future development capital. The Company was able to add proved plus probable reserve volumes at a lower cost compared to prior periods.

(\$ thousands, except per boe amounts)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Total depletion and depreciation	47,454	25,226	88	137,263	70,333	95
Depletion and depreciation (\$/boe)	22.79	22.06	3	22.80	24.67	(8)

Impairment

There were no indicators of impairment or reversal of prior period impairments to the Company's properties and equipment as at September 30, 2017.

Income taxes

For the three months ended September 30, 2017, the Company recorded a deferred income tax recovery of \$2.7 million, as compared to a \$2.3 million deferred income tax recovery for the same period in the prior year. For the nine months ended September 30, 2017, the Company recorded a deferred income tax recovery of \$1.2 million, as compared to a \$8.9 million deferred income tax recovery for the same period in the prior year.

As at September 30, 2017, the Company had approximately \$1.8 billion in tax pools and losses available to reduce future taxable income, as compared to approximately \$1.1 billion in tax pools and losses available as at September 30, 2016. The increase in tax pools and losses available is primarily a result of the ARC acquisition completed in December of 2016.

(\$ thousands of dollars)	September 30, 2017
Canadian Oil and Gas Property Expense ("COGPE")	884,415
Canadian Development Expense ("CDE")	213,542
Canadian Exploration Expense ("CEE")	35,084
Undepreciated Capital Cost ("UCC")	249,790
Cumulative Eligible Capital ("CEC")	568
Scientific Research and Experimental Development ("SR&ED")	4,027
Share issue costs	24,312
Tax losses	372,630
Total	1,784,368

Adjusted Funds Flow from Operations and Net Income (Loss)

For the three months ended September 30, 2017, adjusted funds flow from operations increased by 117 percent to \$41.1 million compared to \$18.9 million during the same period of 2016. Basic and diluted adjusted funds flow from operations per share were \$0.23 per share and \$0.22 per share respectively in the third quarter of 2017 compared to \$0.17 per basic share and \$0.16 per diluted share during the same period of 2016. For the nine months ended September 30, 2017, adjusted funds flow from operations increased by 211 percent to \$136.2 million compared to \$43.8 million during the same period of 2016. Basic and diluted adjusted funds flow from operations per share for the nine months ended September 30, 2017 were \$0.78 per share and \$0.74 per share respectively compared to \$0.43 per basic and \$0.40 per diluted share during the same period of 2016.

The increase in adjusted funds flow from operations for the three and nine months ended September 30, 2017 compared to the same periods in the prior year is due to an increase in production volumes and an increase in the Company's average realized oil and gas sales price as a result of higher commodity prices.

The Company realized a net loss of \$8.2 million in the third quarter of 2017 compared to net income of \$4.1 million for the same period of 2016. The Company recognized a gain on acquisition of \$12.6 million in the third quarter of 2016 contributing to the \$4.1 million in net income recognized. Basic and diluted net loss per share for the quarter were \$0.05 compared to basic and diluted net income per share of \$0.04 and \$0.03 respectively during the same period of 2016.

The Company realized a net loss of \$17.8 million, or \$0.10 per basic and diluted share, for the nine months ended September 30, 2017 compared to a net loss of \$15.4 million, or \$0.15 per basic and diluted share, in the same period of 2016.

The following tables summarize the netbacks on a total dollar basis and per boe basis for the three and nine months ended September 30, 2017 and September 30, 2016.

(\$ thousands)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change

(1) Adjusted funds flow from operations and adjusted funds flow from operations per basic and diluted share are non-IFRS measures which are defined under the Non-IFRS Measures section of this MD&A.

Spartan's corporate strategy remains unchanged despite continued weakness in commodity prices. Through 2015, 2016 and the first three quarters of 2017 Spartan's focus has been on preserving the flexibility of its balance sheet by spending within adjusted funds flow from operations and taking advantage of acquisition opportunities afforded by the downturn in the commodity cycle. Spartan is committed to delivering 10 to 15 percent annual organic production per share growth within adjusted funds flow from operations. Excess funds flow will be invested in discretionary capital additions such as land, seismic, waterflood projects and tuck-in acquisitions. Spartan management may also from time to time complete normal course issuer bid purchases of the Company's common shares. The Company has remained diligent through this time period, focusing on acquiring high quality oil assets at a price that will deliver long term value to its shareholders.

Production stabilized between 8,700 boe/d and 9,700 boe/d in 2015 and the first six months of 2016 as the Company committed to spending within adjusted funds flow from operations in a depressed commodity price environment. Spartan took advantage of the weakness in commodity prices and the Company's strong balance sheet by seeking out and executing on accretive acquisitions that resulted in significant production per share growth in 2016. As a result of the incremental production from the five acquisitions completed in 2016 and the Company's successful 2016 and 2017 drilling programs, as well as increases in production realized from workover and reactivation projects completed on the acquired assets, Spartan achieved record average total production of 22,630 boe/d in the third quarter of 2017. This record average production combined with higher commodity prices resulted in a 94 percent increase in oil and gas sales and a 117 percent increase in adjusted funds flow from operations in the third quarter of 2017 compared to the same period of 2016.

Spartan remained active in the field throughout the third quarter of 2017 with three rigs operating across the Company's southeast Saskatchewan asset base. Spartan continues to drill economic conventional Mississippian open-hole wells, primarily in the Queensdale and Greater Workman/Winmore core areas of southeast Saskatchewan, and unconventional fracture stimulated Midale wells in the Alameda and Pinto core areas of southeast Saskatchewan to grow production organically. Spartan also drilled its first series of conventional open-hole Ratcliffe wells in the Oungre core area of southeast Saskatchewan in the third quarter of 2017.

At September 30, 2017, Spartan's net debt was \$233.1 million. Excluding the Company's finance lease obligations, Spartan's net debt was \$205.1 million with available liquidity of \$144.9 million on the Company's \$350 million credit facility. Spartan management continues to believe that the current economic environment lends itself to preserving capital to deploy on accretive acquisitions, and the Company intends to continue to preserve the strength of its balance sheet by maintaining spending within adjusted funds flow from operations in 2017. Spartan will maintain flexibility in its capital program and adjust spending based on prevailing commodity prices, while continuing to seek out opportunities to add additional long term value through accretive acquisitions.

Capital Expenditures

The following table details the cash capital additions relating to the Company's properties and equipment and exploration and evaluation assets for the three and nine months ended September 30, 2017 and 2016:

(\$ thousands)	For the three months ended September 30,			For the nine months ended September 30,		
	2017	2016	% change	2017	2016	% change
Drilling and completions	22,800	13,401	70	74,850	28,261	165
Equipment, facilities and CO ₂ EOR capital	11,381	5,786	97	27,222	12,464	118
Other	930	680	37	2,637	1,915	38
Total development capital expenditures⁽¹⁾	35,111	19,867	77	104,709	42,640	146
Land and seismic	913	913	-	5,781	2,126	172
Waterflood capital	515	-	n/a	2,074	-	n/a
Total discretionary capital expenditures	1,428	913	56	7,855	2,126	269
Acquisitions	4,365	23,470	(81)	11,966	87,923	(86)
Total capital expenditures	40,904	44,250	(8)	124,530	132,689	(6)

(1) Total development capital expenditures is a non-IFRS measure which is defined under the Non-IFRS Measures section of this MD&A.

Drilling and completions costs for the three months ended September 30, 2017 were \$22.8 million, compared to \$13.4 million for the same period in 2016, as the Company drilled 39 (28.0 net) development wells in the third quarter of 2017. For the nine months ended September 30, 2017, Spartan incurred \$74.9 million in drilling and completions costs compared to \$28.3 million for the nine months ended September 30, 2016. Spartan drilled 105 (84.5 net) development wells in the first three quarters of 2017 and brought 93 (76.5 net) wells on production, including 2.0 net wells drilled in 2016. As at September 30, 2017, the Company had drilled 12 (8.0 net) wells that were not yet on production.

A summary of Spartan’s drilling activity in the first three quarters of 2017 is provided below.

2017 Drilling Program	Development Wells Spud		Development Wells On Production		Exploratory Wells Spud	
	Gross	Net	Gross	Net	Gross	Net
As at September 30, 2017						
Southeast Saskatchewan – Frobisher	56	46.7	48	40.5	2	2.0
Southeast Saskatchewan – Frac Midale	22	17.9	21	17.5	-	-
Southeast Saskatchewan- Frac Torquay	3	1.2	3	1.2	-	-
Southeast Saskatchewan- Ratcliffe	9	4.2	6	2.8	-	-
West Central Saskatchewan – Frac Viking	15	14.5	15	14.5	-	-
Total	105	84.5	93	76.5	2	2.0

Spartan incurred \$11.4 million in equipment, facilities and CO₂ enhanced oil recovery (“EOR”) capital expenditures in the third quarter of 2017 in the form of new well equipping and tie-in costs, well optimizations, facility improvements, pipeline capital and CO₂ flood projects. For the nine months ended September 30, 2017, equipment, facilities and CO₂ EOR capital expenditures totaled \$27.2 million. Land and seismic costs for the three and nine months ended September 30, 2017 were \$0.9 million and \$5.8 million respectively as the Company continued to advance its land position in its core areas. For the nine months ended September 30, 2017, Spartan has incurred \$2.1 million in waterflood capital expenditures primarily in its Alameda core area.

Spartan executed on its capital program in the first three quarters of 2017 while spending within adjusted funds flow from operations in a low commodity price environment. With the volatility in commodity prices, Spartan continues to monitor its capital spending plans and forecasted adjusted funds flow from operations. Capital expenditures are largely discretionary and the flexibility of the capital plan provides the ability to allocate capital as warranted to preserve the strength of the Company’s balance sheet. Spartan spent \$104.7 million in total development capital expenditures in the first three quarters of 2017 while generating \$136.2 million in adjusted funds flow from operations over the nine month period. Spartan invested \$19.8 million of the \$31.5 million in excess funds flow from operations in land, seismic, waterflood projects and tuck-in acquisitions.

Oungre Acquisitions

On July 4, 2017, Spartan completed the acquisition of certain oil and gas assets in southeast Saskatchewan for total cash consideration, net of closing adjustments, of \$4.4 million. This acquisition was strategic to Spartan as the Company acquired the remaining 10.7% working interest in the Oungre Unit. With a 100 percent working interest, Spartan can accelerate its waterflood project in the unit.

On March 23, 2017, Spartan completed the acquisition of certain oil and gas assets in southeast Saskatchewan for total cash consideration, net of closing adjustments, of \$6.5 million. The acquisition included approximately 30 boe/d (99% light oil) of production and 13.2 net sections of land prospective for drilling Ratcliffe and Torquay wells and 27.3 net sections of Ratcliffe/Torquay royalty acreage in the Oungre area of southeast Saskatchewan. In addition to adding 13.0 net conventional Ratcliffe drilling locations in the Company’s core Oungre area, this acquisition included approximately 26.0 net unrisks Torquay drilling locations and increased the Company’s position in the emerging unconventional Torquay play to 34.5 net sections of land with 138.0 net unrisks drilling locations.

ARC Acquisition

On December 8, 2016, Spartan completed the acquisition of certain oil and gas assets in southeast Saskatchewan (the “ARC Acquisition”) for total cash consideration, net of closing adjustments, of \$692.7 million, excluding transaction costs. The acquisition included approximately 7,500 boe/d (98% light oil and liquids) of low-decline production, 22.5 MMboe of proved developed producing reserves, 26.9 MMboe of total proved reserves, 39.3 MMboe of proved plus probable reserves and 98,000 net acres of land.

The acquired assets are characterized by a low base decline of approximately 12% and include a large suite of opportunities including 404 net drilling locations, recompletion opportunities and waterflood expansion across an extensive land base spanning the conventional Mississippian fairway. The acquired assets include working interest ownership in two world class CO₂ EOR projects as well as ownership in strategic infrastructure across the asset base that supports both current and future volumes. The ARC Acquisition also includes ownership of a significant proprietary 2D and 3D seismic database.

Midale Acquisition

On August 3, 2016, Spartan completed the acquisition of certain oil and gas assets located in the Midale fairway of southeast Saskatchewan (the "Midale Acquisition") for total cash consideration, net of closing adjustments, of \$23.4 million, excluding transaction costs. Upon closing of the Midale Acquisition, the assets acquired were producing approximately 450 boe/d (93% light oil and liquids) and included approximately 29.2 net sections of land.

Greater Corning-Manor Acquisition

On June 30, 2016, Spartan completed the acquisition of certain oil and gas assets in the Alida, Tilston and Souris Valley fairways of southeast Saskatchewan (the "Corning-Manor Acquisition") for total cash consideration, net of closing adjustments, of \$61.9 million, excluding transaction costs. The Corning-Manor acquisition included approximately 1,500 boe/d (99% light oil and liquids) of low-decline production, all required production infrastructure, 1,141 km² of proprietary 3D seismic and 547 km of proprietary 2D seismic. Spartan initially identified 42.5 net open-hole Mississippian drilling locations on the assets.

Wyatt Oil + Gas Inc. Acquisition

On June 23, 2016, Spartan completed the acquisition of Wyatt Oil + Gas Inc. ("Wyatt"), a privately held corporation with light oil assets in southeast Saskatchewan, for total consideration of \$78.5 million. The total consideration was comprised of the issuance of 11.4 million common shares of Spartan and the assumption of approximately \$43.6 million of net debt.

The acquisition of Wyatt included approximately 1,330 boe/d (76% light oil and liquids) of production focused in the Alameda and Elcott areas of southeast Saskatchewan. The assets are comprised of approximately 45 net sections of land prospective for both Midale and Frobisher light oil and are complementary to Spartan's existing southeast Saskatchewan core areas. Spartan initially identified over 177 (162 net) Mississippian drilling locations across the asset base comprised of 79 (75 net) frac Midale locations and 98 (87 net) open-hole Midale and Frobisher locations.

The Alameda asset includes 29 net contiguous sections of operated lands with a 97% average working interest. The Alameda property has large original oil in place with a current recovery factor of approximately 1.3%. Wyatt had commenced a 3.5 section waterflood project on the lands. Early results are encouraging and Spartan believes that there is significant unbooked waterflood upside associated with the assets. The Wyatt acquisition includes all infrastructure required to accommodate future production growth.

Winmore Acquisition

On May 30, 2016, Spartan completed the acquisition of certain oil and gas assets in its core Winmore area (the "Winmore Acquisition") in southeast Saskatchewan. The Winmore Acquisition included approximately 150 boe/d of production and 16.6 net sections of land. Spartan identified 29.7 net economic open-hole drilling locations on the acquired assets.

The Winmore area has recently been a key driver of growth for Spartan with wells significantly outperforming Spartan's internal type curves. In addition, the consolidation of working interests in portions of the pool will allow Spartan to accelerate future waterflood projects in the area. Total consideration for the Winmore Acquisition, net of closing adjustments, was \$9.4 million excluding transaction costs, comprised of cash in the amount of \$2.1 million and 2.3 million common shares of Spartan.

2016 Acquisitions Summary

A summary of the five acquisitions completed in 2016 is as follows:

- Total purchase price of approximately \$865.9 million (net of closing adjustments)
- 10,930 boe/d of light oil production (95% oil and liquids)
- 223,262 net acres of land
- 718 net drilling locations
- 32.5 MMboe of Proved Developed Producing reserves
- 43.3 MMboe of Total Proved reserves

- 63.3 MMboe of Proved plus Probable reserves

Spartan has maintained a disciplined approach to acquisitions through the recent economic downturn. Moving forward, Spartan will continue to seek out acquisition opportunities that deliver high quality assets at an attractive valuation, while at the same time protecting balance sheet flexibility.

CAPITALIZATION AND CAPITAL RESOURCES

The Company's objective when managing capital is to maintain a capital structure which allows the Company to execute its growth strategy through strategic acquisitions and expenditures on exploration and development activities, while maintaining a strong financial position. The Company evaluates its ability to carry on business as a going concern on a quarterly basis. The Company considers its capital structure to include share capital and net debt excluding finance lease obligations (defined as bank debt plus trade and other liabilities less current assets). Spartan manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. The Company's objective is met by retaining equity to guard against the possibility that cash flows from assets will not be sufficient to meet future cash flow requirements. In order to maintain or adjust the capital structure, the Company may adjust capital spending, issue new shares, issue new debt or repay existing debt to manage current and projected debt levels. The Company is not subject to any externally imposed restrictions on capital.

Spartan manages and monitors its capital structure and short-term financing requirements using the ratio of net debt (excluding finance lease obligations) to adjusted funds flow from operations. Adjusted funds flow from operations is calculated based on cash flows from operating activities before changes in non-cash working capital, transaction costs and decommissioning obligation expenditures incurred. This metric is used to monitor the Company's overall debt position and monitor the strength of the Company's statement of financial position. The Company's net debt (excluding finance lease obligations) to annualized adjusted funds flow from operations ratio for the third quarter of 2017 was 1.3 times.

Share Capital

Common share consolidation

On June 20, 2017, the Company completed a share consolidation of the Company's issued and outstanding common shares on the basis of one post-consolidation common share for every three pre-consolidation common shares issued and outstanding. As required under IFRS, all common shares, warrants, options, restricted share units and income (loss) per share amounts have been restated to give retrospective effect to the share consolidation.

	For the three months ended September 30,		For the nine months ended September 30,	
	2017	2016	2017	2016
Weighted average outstanding common shares ⁽¹⁾⁽⁵⁾				
Basic	175,603,993	109,979,432	175,507,426	101,036,835
Diluted	182,714,645	118,715,905	183,497,285	109,211,605
As at September 30 ⁽⁵⁾				
Common shares			175,607,959	114,957,696
Warrants ⁽²⁾			10,129,308	10,415,416
Common share options ⁽³⁾			3,421,555	3,734,667
Restricted share units ⁽⁴⁾			1,094,770	369,738

(1) Per share information is calculated on the basis of the weighted average number of common shares outstanding during the period. Diluted per share information reflects the potential dilution that could occur if securities or other contracts to issue common shares were exercised or converted to common shares. Diluted per share information is calculated using a method which assumes that any proceeds received by the Company upon the exercise of in-the-money stock options or warrants plus unamortized share-based compensation expense would be used to buy back common shares at the average market price for the period.

(2) All of the outstanding warrants were exercisable at September 30, 2017.

(3) As at September 30, 2017, 3,033,259 of the options to purchase common shares were vested and exercisable.

(4) As at September 30, 2017 there were 100,123 vested and exercisable restricted share units outstanding.

(5) Numbers have been restated on a three for one basis to reflect the share consolidation that occurred on June 20, 2017.

Spartan's total capitalization as at September 30, 2017 is as follows:

(\$ thousands)	Amount
Net debt ⁽¹⁾	233,076
Market capitalization ⁽²⁾	1,199,402
Total capitalization as at September 30, 2017	1,432,478

(1) Includes finance lease obligations of \$27.9 million at September 30, 2017. Excluding finance lease obligations, net debt was \$205.1 million and total capitalization was \$1,404.5 million at September 30, 2017.

(2) As at September 29, 2017, the closing market price of Spartan Energy Corp. shares was \$6.83 per share.

Liquidity

Bank Debt

As at September 30, 2017, the Company had available a \$350 million (December 31, 2016 - \$350 million) syndicated revolving demand credit facility with six Canadian chartered banks. The credit facility bears interest on a grid system which ranges from bank prime plus 1.0 percent to bank prime plus 4.5 percent depending on the Company's debt to EBITDA ratio ranging from less than or equal to 1:1 to greater than 3.5:1. The amount of the facility is subject to a borrowing base redetermination test performed at least annually, primarily based on reserves, using commodity prices estimated by the lender, as well as other factors. If a borrowing base shortfall is identified during a borrowing base redetermination, the portion drawn above the borrowing base is required to be repaid within 60 days. The Company is not subject to any financial covenants under the credit facility. As at September 30, 2017 and December 31, 2016, the Company was in compliance with all operating covenants outlined in the credit agreement.

The credit facility provides that advances may be made by way of direct prime rate loans, USBR loans, LIBOR loans, bankers' acceptances, letters of credit or letters of guarantee. The facility is secured by a \$1.0 billion debenture and a general security agreement over all the petroleum and natural gas assets of the Company. As at September 30, 2017 the Company had \$193.3 million drawn on the facility, excluding the letter of guarantee discussed below (December 31, 2016 - \$217.9 million).

As at September 30, 2017 the Company had a letter of guarantee outstanding in the amount of \$2.8 million against the credit facility (December 31, 2016 - \$2.5 million).

The next borrowing base review is scheduled to occur on or before May 31, 2018.

Finance Lease Obligations

As part of the acquisition of Wyatt, Spartan inherited a contract whereby the Company is committed to deliver minimum gas volumes to a third party gas processing facility constructed at the Alameda oil battery for a period of eight years. The facility was commissioned for operation in August 2016. The contract was structured whereby the minimum committed volumes, and the fixed capital component of the gas processing fee paid to the builder and operator of the facility on those committed volumes, ensures the third party a return on capital over the eight year term of the agreement. The contract is considered a finance lease under IAS 17 and is recognized as a liability on the interim consolidated statements of financial position. The terms of the contract provide Spartan with the right to obtain substantially all of the economic benefits from the use of the plant over the length of the contract. As at September 30, 2017, the finance lease obligation of \$27.9 million was recorded as a liability on the interim consolidated statements of financial position. The finance lease bears interest at an implicit rate of 5.64 percent.

As at September 30, 2017, Spartan's net debt was \$233.1 million, including finance lease obligations. Excluding the Company's finance lease obligations, Spartan's net debt was \$205.1 million with available liquidity of \$144.9 million on the Company's \$350 million credit facility.

On an ongoing basis, Spartan will typically utilize three sources of funding to finance its capital expenditure program: internally generated adjusted funds flow from operations, debt where appropriate and new equity issuances if available on favourable terms. When financing corporate acquisitions, the Company may also assume certain future liabilities. In addition, the Company may adjust its capital expenditure program depending upon commodity price outlook.

The Company's investment selection process is based on risk analysis to ensure capital expenditures balance the objectives of immediate cash flow growth (development activity) and future cash flow from the discovery of reserves (exploration). This careful prospect selection process can yield consistent and efficient results. The Company focuses its activity in a small number of core areas and concentrates on play types with which management is familiar, allowing it to leverage off its experience and knowledge in these areas. The Company will consider the use of farm-outs to minimize risk on plays it considers higher risk.

OFF BALANCE SHEET ARRANGEMENTS

The Company does not have any special purpose entities nor is it a party to any off-balance sheet arrangements.

USE OF ESTIMATES AND JUDGMENTS

The preparation of financial statements requires management to make certain judgments, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, revenues and expenses. Management reviews estimates and assumptions on a continual basis and makes changes to such estimates based on historical experience, and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Accordingly, the impact of these estimates, assumptions and judgments are subject to management uncertainty, and the effect on the financial statements in future periods could be material. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimates are revised and in any future years affected. Information about significant areas of estimation uncertainty and critical judgments in applying accounting policies that have the most significant effect on the amounts recognized in the consolidated financial statements are as follows:

(i) Use of Estimates

The following are the key assumptions concerning the sources of estimation uncertainty at the end of the reporting period, that have a significant risk of causing adjustments to the carrying amounts of assets and liabilities.

Reserve estimates

The Company's reserves have been evaluated in accordance with the Canadian Oil and Gas Evaluation Handbook and comply with the standards that govern all aspects of reserves as prescribed in National Instrument 51-101, Standards of Disclosure for Oil and Gas Activities ("NI 51-101"). Under NI 51-101 standards, proved plus probable reserves are considered a "best estimate" of future recoverable reserves.

The estimation of petroleum and natural gas reserves is an inherently complex process. Proved and probable reserves are estimated based on geological data, geophysical data, engineering data, projected future rates of production, estimated commodity prices, costs, discount rates and the timing of future expenditures. Reserves estimates, although not reported as part of the Company's financial statements, can have a significant effect on earnings, assets, as a result of their impact on depletion and impairment, decommissioning provisions, deferred income taxes and fair values in business combinations. Accordingly, the impact to the consolidated financial statements of changes to estimates of reserves in future periods could be material.

Decommissioning provisions

Amounts are recorded for decommissioning provisions that will be incurred by the Company at the end of the operating life of the facilities and properties, and upon retirement of its petroleum and natural gas assets. Estimates of these costs are subject

to uncertainty associated with the method, timing and extent of future decommissioning activities. The decommissioning provisions and related assets and expenses are impacted by estimates with respect to the costs and timing of decommissioning.

Business combinations

Estimates are made of the fair value of assets and liabilities acquired and contingent liabilities assumed which includes assessing the value of oil and gas properties based on the estimation of recoverable quantities of proven and probable reserves.

Share-based compensation

Compensation expense recognized for the Company's share-based compensation plan is accrued over the vesting period based on fair values. Fair values are determined using the Black-Scholes option pricing model while the fair value of restricted and performance awards are valued based on the closing share price on the grant date. In assessing the fair value of share based compensation, significant assumptions such as expected volatility, dividend yield, expected term, estimated forfeiture rates and performance multipliers for performance awards are made.

Income taxes

The Company follows the asset/liability method for calculating deferred income taxes. Tax interpretations, regulations and legislation in the various jurisdictions in which the Company operates are subject to change. As such, income taxes are subject to measurement uncertainty. Deferred income tax assets are recognized only to the extent that those assets are considered recoverable. Deferred income tax assets are assessed by management at the end of the reporting period to determine the likelihood that they will be realized from future taxable earnings.

(ii) Judgments

The following are the critical judgments that management has made in the process of applying the Company's accounting policies and that have the most significant effect on the amounts recognized in the consolidated financial statements.

Cash generating unit ("CGU")

For the purpose of impairment testing, petroleum and natural gas assets are aggregated into CGUs. The determination of CGUs requires judgment in defining the smallest identifiable group of assets that generate cash inflows that are largely independent of the cash inflows from other assets or group of assets. CGUs are determined by similar geological structure, shared infrastructure, geographical proximity, commodity type, similar exposure to market risks and materiality.

Impairment

Judgments are required to assess when impairment indicators exist and impairment testing is required. The recoverable amounts of CGUs are based on the higher of their value-in-use and fair value less costs to sell. These calculations require the use of estimates and assumptions. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. Value in use is generally computed by reference to the present value of the future cash flows expected to be derived from production of proved and probable reserves. Management does not expect a significant difference between value in use and fair value less cost to sell.

Exploration and evaluation assets ("E&E")

The decision to transfer assets from E&E to properties and equipment requires management to make certain judgments as to future events and is based on whether economic quantities of proved plus probable reserves have been found to determine a project's technical feasibility and commercial viability.

Joint control

Judgment is required to determine when the Company has joint control over an arrangement, which requires an assessment of the capital and operating activities of the projects it undertakes with partners and when the decision in relation to those activities require unanimous consent.

Income taxes

Judgments are made by management at the end of the reporting period to determine the likelihood that deferred income tax assets will be realized from future taxable earnings. Assessing the recoverability of deferred income tax assets requires the Company to make judgments related to the expectations of future cash flows from operations and the application of existing tax laws in each jurisdiction. To the extent that assumptions regarding future profitability change, there can be an increase or decrease in the amounts recognized in profit or loss in the period in which the change occurs.

ACCOUNTING STANDARDS ISSUED BUT NOT YET APPLIED

IFRS 15 Revenue from Contracts with Customers was issued in May 2014 and replaces IAS 18 Revenue, IAS 11 Construction Contracts and related interpretations. The standard provides clarification for recognizing revenue from contracts with customers and establishes a single revenue recognition and measurement framework that applies to contracts with customers. The standard is required to be adopted either retrospectively or using a modified transition approach by the Company on January 1, 2018. The Company is currently evaluating its contracts with customers and the impact of the standard on the Company's consolidated financial statements. Additional disclosures including, but not limited to, contracts with customers, disaggregation of revenue and contract balances may be required to enable users of the financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from its contracts with customers.

IFRS 9 Financial Instruments was issued in July 2014 and is intended to replace IAS 39, Financial Instruments: Recognition and Measurement and uses a single approach to determine whether a financial asset is measured at amortized cost or fair value, replacing the multiple rules in IAS 39. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39, and incorporates new hedge accounting requirements. The standard is required to be adopted by the Company on January 1, 2018. The Company is currently evaluating the impact of the standard on the Company's consolidated financial statements.

IFRS 16 Leases was issued in January 2016 and replaces IAS 17 Leases. Under IAS 17, lessees were required to make a distinction between a finance lease and an operating lease. If the lease was classified as a finance lease, a lease liability was included on the statement of financial position. IFRS 16 now requires lessees to recognize a right-of-use asset and lease liability reflecting future lease payments for virtually all lease contracts. The right-of-use asset is treated similarly to other non-financial assets and depreciated accordingly. The lease liability accrues interest. The IASB has included an optional exemption for certain short-term leases and leases of low-value assets; however, this exemption can only be applied by lessees. Under IFRS 16, a contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Control is conveyed where the customer has both the right to direct the identified asset's use and obtain substantially all the economic benefits from that use. IFRS 16 is effective for annual periods beginning on or after January 1, 2019 with early adoption permitted if IFRS 15, Revenue from Contracts with Customers, is also applied. The Company is currently evaluating the impact of the standard on the Company's consolidated financial statements.

BUSINESS RISKS

Spartan is engaged in the exploration, development and production of crude oil and natural gas. There are a number of risks facing participants in the Canadian oil and gas industry. Some of the risks are common to all businesses while others are specific to the sector. Operationally, the Company faces risks that are associated with finding, developing, and producing oil and gas reserves. These include risks associated with drilling and completion, reservoir performance uncertainties, access to processing facilities, environmental factors, and regulatory, environment and safety concerns. Financial risks associated with the petroleum industry include fluctuations in commodity prices, interest rates, currency exchange rates, access to capital markets, and the cost of goods and services.

Spartan attempts to mitigate these risks by employing highly qualified people, utilizing sound operating and business practices, and evaluating all potential and existing wells using the latest applicable technology. Spartan complies with government regulations and has in place an up-to-date emergency response test. Environment and safety policies and standards are adhered to. Decommissioning liabilities are recognized upon acquisition, construction, development and/or normal use of the assets. Spartan maintains property and liability insurance coverage. The coverage provides a reasonable amount of protection from risk of loss; however, not all risks are foreseeable or insurable.

The following reviews the general and specific risks and includes Spartan's approach to managing these risks.

Prices, Markets and Marketing of Crude Oil and Natural Gas

Oil and natural gas are commodities whose prices are determined based on world demand, supply and other factors, all of which are beyond the control of the Company. World prices for oil and natural gas have fluctuated widely in recent years. Any material decline in prices could result in a reduction of net production revenue. Certain wells or other projects may become uneconomic as a result of a decline in world oil prices and natural gas prices, leading to a reduction in the volume of the Company's oil and gas reserves. The Company might also elect not to produce from certain wells at lower prices. All of these factors could result in a material decrease in the Company's future net production revenue, causing a reduction in its oil and gas acquisition and development activities. In addition, bank borrowings available to the Company are in part determined by the borrowing base of the Company. A sustained material decline in prices from historical average prices could limit or reduce the Company's borrowing base, therefore reducing the bank credit available to the Company, and could require that a portion of any existing bank debt of the Company be repaid.

In addition to establishing markets for its oil and natural gas, the Company must also successfully market its oil and natural gas to prospective buyers. The marketability and price of oil and natural gas, which may be acquired or discovered by the Company, will be affected by numerous factors beyond its control. The Company will be affected by the differential between the price paid by refiners for light quality oil and the grades of oil produced by the Company. The ability of the Company to market its natural gas may depend upon its ability to acquire space on pipelines, which deliver natural gas to commercial markets. The Company will also likely be affected by deliverability uncertainties related to the proximity of its reserves to pipelines and processing facilities and related to operational problems with such pipelines and facilities and extensive government regulation relating to price, taxes, royalties, land tenure, allowable production, the export of oil and natural gas and many other aspects of the oil and natural gas business. The Company has limited direct experience in the marketing of oil and natural gas.

Risk Management

Spartan may, from time to time, enter into physical hedges or financial derivative instruments in order to manage its commodity price risk.

Exploration Risk

Oil and natural gas exploration involves a high degree of risk and there is no assurance that expenditures made on future exploration by the Company will result in new discoveries of oil or natural gas in commercial quantities. It is difficult to project the costs of implementing an exploratory drilling program due to the inherent uncertainties of drilling in unknown formations, the costs associated with encountering various drilling conditions such as over pressured zones and tools lost in the hole, and

changes in drilling plans and locations as a result of prior exploratory wells or additional seismic data and interpretations thereof.

In addition, oil and gas operations are subject to the risks of exploration, development and production of oil and natural gas properties, including encountering unexpected formations or pressures, premature declines of reservoirs, blow-outs, cratering, sour gas releases, fires and spills. Losses resulting from the occurrence of any of these risks could have a materially adverse effect on future results of operations, liquidity and financial condition.

Spartan attempts to minimize finding risk by ensuring that:

- the majority of its prospects have multi-zone potential;
- its activity is focused in core regions where management's expertise and experience are greatest;
- the number of wells drilled is large enough to increase the probability of statistical success rates;
- working interests are targeted at over 50 percent in new prospects; and
- geophysical techniques are utilized where appropriate.

Investment Risk Profile

The Company's investment selection process is based on risk analysis to ensure capital expenditures balance the objectives of immediate cash flow growth (development activity) and future cash flow from the discovery of reserves (exploration). This careful prospect selection process can yield consistent and efficient results. The Company focuses its activity in a small number of core areas and concentrates on play types with which management is familiar, allowing it to leverage off its experience and knowledge in these areas. The Company will consider the use of farmouts to minimize risk on plays it considers higher risk.

Production

Beyond exploration risk, there is the potential that the Company's oil and natural gas reserves may not be economically produced at prevailing prices. Spartan minimizes this risk by generating exploration prospects internally, targeting high quality products and attempting to operate the associated project. Operational control allows the Company to control costs, timing, method and sales of production. Production risk is also minimized by concentrating exploration efforts in regions where facilities and infrastructure are Spartan owned, or the Company can control the future development of new facilities and infrastructure.

Reserve Estimates

Estimates of economically recoverable oil and natural gas reserves (including natural gas liquids) and the future net cash flows there from are based upon a number of variable factors and assumptions, such as commodity prices, projected production from the properties, the assumed effects of regulation by government agencies and future operating costs. All of these estimates may vary from actual results. Estimates of the recoverable oil and natural gas reserves attributable to any particular group of properties, classifications of such reserves based on risk of recovery and estimates of future net revenues expected there from, may vary. The Company's actual production, revenues, taxes, development and operating expenditures with respect to its reserves may vary from such estimates, and such variances could be material.

Financial and Liquidity Risks

The Company anticipates that it will make substantial capital expenditures for the acquisition, exploration, development and production of oil and natural gas reserves in the future. On an ongoing basis, Spartan will typically utilize three sources of funding to finance its capital expenditure program: internally generated adjusted funds flow from operations, debt where deemed appropriate and new equity issues if available on favourable terms.

Cash flow is influenced by factors, which the Company cannot control, such as commodity prices, the Canada/U.S. currency exchange rate, interest rates and changes to existing government regulations and tax policies. Should circumstances affect cash flow in a detrimental way, the Company may have limited ability to expend the capital necessary to undertake or complete future drilling programs. In such circumstances, Spartan would be required to either reduce the level of its capital expenditures or supplement its capital expenditure program with additional debt and/or equity financing. There can be no assurance that debt or equity financing will be available or sufficient to meet these requirements or, if debt or equity financing is available, that it will be on terms acceptable to the Company. Moreover, future activities may require the Company to alter its capitalization significantly. The inability of the Company to access sufficient capital for its operations could have a material adverse effect on the Company's financial condition, results of operations or prospects.

Issuance of Debt

From time to time, the Company may enter into transactions to acquire assets or the shares of other companies. These transactions may be financed partially or wholly with debt, which may increase the Company's debt levels above industry standards. Neither the Company's articles nor its by-laws limit the amount of indebtedness that the Company may incur. The level of the Company's indebtedness from time to time could impair the Company's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Environmental and Safety Risks

There are potential risks to the environment inherent in the business activities of the Company. Spartan has developed and implemented policies and procedures to mitigate environmental, health and safety (EH&S) risks. These policies and procedures are designed to protect and maintain the environment, and public and employee safety, with respect to all corporate operations on behalf of shareholders, employees and the public at large. The Company mitigates environmental and safety risks by maintaining its facilities, complying with all provincial and federal environmental and safety regulations and maintaining adequate insurance.

Inflation Risks

Inflation risks subject the Company to potential erosion of product netbacks. For example, increasing domestic prices for oil and natural gas production equipment and services can inflate the costs of operations.

Competitive Industry Conditions

The oil and gas industry is highly competitive. The Company's competitors for the acquisition, exploration, production and development of oil and natural gas properties, and for capital to finance such activities, include companies that have greater financial and personnel resources available to them than the Company.

The Company actively competes for reserve acquisitions, exploration leases, licences and concessions and skilled industry personnel with a substantial number of other oil and gas companies, many of which have significantly greater financial resources than the Company. The Company's competitors include major integrated oil and natural gas companies, income trusts and numerous other independent oil and natural gas companies and individual producers and operators.

The Company attempts to mitigate competitive risks through the pursuit of strategic farmins and the internal generation of its own exploration prospects. The goal of these efforts is to build a quality inventory of undeveloped lands and drillable prospects that can fuel future growth.

Supply of Service and Production Equipment

The supply of service and production equipment at competitive prices is critical to the ability to add reserves at a competitive cost and produce these reserves in an economic and timely fashion. In periods of increased activity these services and supplies can become difficult to obtain. Demand for such limited equipment or access restrictions may affect the availability of such equipment to the Company and may delay exploration and development activities. The Company attempts to mitigate this risk

by developing strong long term relationships with suppliers and contractors and maintains an appropriate inventory of production equipment.

CONTRACTUAL OBLIGATIONS AND COMMITMENTS

Spartan is obligated to pay various costs associated with operations in the normal course of business. These costs include royalties paid to the Alberta and Saskatchewan governments, surface and mineral lease rentals to various landowners, and abandonment and reclamation costs. These costs are highly dependent on the future operating environment and are subject to changes in commodity prices, ownership, production volumes and government policies. As at September 30, 2017 Spartan was committed to future minimum payments as follows:

	2017	2018	2019	2020	2021	Thereafter	Total
Operating lease – office ⁽¹⁾	438	292	-	-	-	-	\$ 730
Pipeline transportation ^(2,3)	347	1,453	1,572	1,310	-	-	\$ 4,682
Gas processing ^(2,4)	1,498	5,944	5,944	5,961	5,026	8,528	\$ 32,901
	2,283	7,689	7,516	7,271	5,026	8,528	\$ 38,313

(1) Includes operating costs.

(2) Includes new commitments assumed as part of the acquisition of Wyatt Oil and Gas Inc. in 2016.

(3) Includes a pipeline transportation tariff on minimum oil volumes delivered from the Alameda field to the main Southeast Saskatchewan trunk-line. The transportation tariff is deducted from the Company's realized oil price when sold and included in oil and gas sales. Costs related to under-delivered volumes are included in operating and transportation costs.

(4) Includes the capital component of the gas processing fee on minimum gas volumes to be delivered to a gas processing facility constructed at the Alameda oil battery. The facility was commissioned for operation in August 2016. Sales from natural gas, NGLs and NGLs that can be blended with produced oil and sold as oil, are recognized in revenue. The contract is considered a Finance Lease under IAS 17 and is recognized as a liability on the interim consolidated statements of financial position (see note 7 of the interim consolidated financial statements).
